REMOTE TRANSMISSION COOLING SYSTEM

The "DAWG" is the perfect transmission cooling system when space is limited and "RAM Air" is not readily available. The unit provides maximum cooling protection in all conditions. Whether mounted as a conventional transmission oil cooler or remotely placed on the vehicle, the transmission is continuously protected.

The combination of a "high-flow" electric fan, and either a high performance cooler or plate style cooler, gives every consumer one of the most economical and effective add-on cooling products ever introduced.

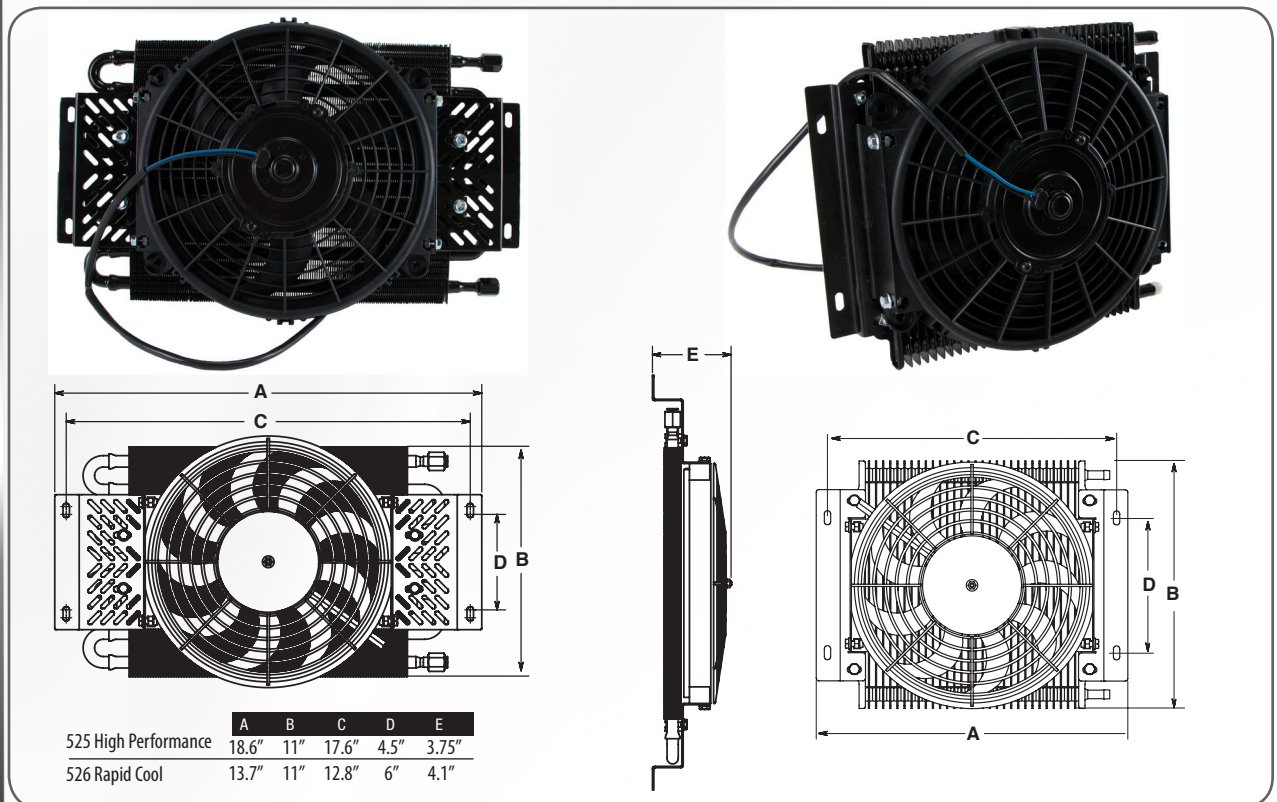

The "DAWG" can be manually controlled with an optional switch or by using our digital fan controller, part number 3655 (not included) to provide automatic operation when cooling is needed. The unit is perfect for the every day consumer, or gives the experienced owner the ability to use installation parameters with VERY specific objectives.

Ideal for racing, motorhomes, off-road vehicles or light trucks and SUVs, this unit will provide added peace of mind knowing your vehicle's transmission is protected by the number one name in cooling products, Hayden® Automotive.

Hose not included, use hose part #105 (11/32" x 4') or part #125 (11/32" x 25').

High Performance 525 Model
Threaded Cooler Fittings for Maximum Dependability

Rapid Cool 526 Model
Ultra Compact Design Provides Same Cooling as the High Performance Model

Anodized Brushed Aluminum Brackets • Remote Mounting • Fan and Cooler Pre-assembled
